DETAILED ACTION

1. In view of the Appeal Brief filed on May 8, 2006, PROSECUTION IS HEREBY REOPENED. Upon close review of the claims, the prior art, and applicant's remarks in the Appeal Brief it appears that the allowance of claims 1-15 are appropriate.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

The integrated circuit of U.S. Patent No. 6,000,036 by Durham is functionally equivalent to the claimed processing circuit including a plurality of processing modules for executing multiple tasks because the integrated circuit performs the claimed limitations of generating a task allocation scenario for allocating the tasks among the processing modules, estimating temperature-associated information for various locations in the processing circuit, and determining whether a temperature threshold would be exceeded if the tasks were to be executed according to the scenario. Although Durham teaches indicating or estimating temperature-associated information for various locations in the processing circuit (col. 3, line 55 – col. 4, line 61), Durham fails to disclose modifying parameters for executing tasks on one or more adjacent processing modules in order to reduce heat generated by the adjacent processing modules, which contributes to the excessive temperature at the first processing module, as recited in claims 1-4, 8-11, and 15, and prior to executing the tasks, estimating temperature-associated information for various locations in the processing circuit as would occur if tasks were executed according to the scenario, as recited in claims 5-7 and 12-14.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
